## Industrial Gigabit Ethernet PoE switch in miniature format provides up to 120W operating current for end devices

UBF EDV Handel und Beratung Jürgen Fischer GmbH present an Industrial Power over Gigabit Ethernet Switch (High PoE Gigabit Endspan) in miniature format.

Cameras, access points or IP phones are not always there, where the devices can be easily connected to the central IT.

In such cases, network connection and power supply often take place outside air-conditioned areas in tight spaces.

The 5 port Gigabit Ethernet high PoE switch in miniature format allows the connection of up to 4 Gigabit Ethernet end devices with up to 30W operating current via the data lines.

The fanless metal case measures only 30x95x75mm (WxHxD) and can either be snapped onto a 35mm DIN rail or attached to the wall with included accessories.

With 10/100/1000MBit/s Gigabit Ethernet, all common end devices can be connected: IP telephones, WLAN access points, video cameras and other PoE devices or in conjunction with PoE Splitters even non-PoE devices. The support of up to 10 KBytes Jumbo Frames in combination with Gigabit Ethernet also provides sufficient bandwidth for high-resolution video transmission.
